

ABSTRACT

The present invention provides a cell-containing preparation comprising cells containing a DNA having a base
5 sequence represented by SEQ ID NO:1 or 2, or a DNA hybridizable
with a DNA having a base sequence represented by SEQ ID NO:1
or 2 under stringent conditions, and a fibrous protein.

The cell-containing preparation of the present invention
makes it possible to more efficiently supply NK4 having an
10 inhibitory action against the growth or metastasis of cancers
to cancer cells.
